

PHASE 1 – BRAINSTORMING & IDEATION

Project Title

- LegalEase – AI-Powered Legal Document Generator

Problem Identification

- Creating legal documents manually can take time and may be difficult for users without a legal background.
- Users need a simple way to provide document details and receive a structured first draft.

Proposed Idea

- LegalEase is designed as an AI-assisted web application that collects document information and generates editable legal drafts.
- The project supports document types such as employment contracts, lease agreements and NDAs.

Objectives

- Simplify the creation of structured legal-document drafts.
- Collect document requirements through a simple interface.
- Generate formal document text based on document type, parties, terms and dates.
- Allow users to preview, edit and export the generated draft.

Target Users / Scenarios

- Startup founders preparing employment contracts.
- Freelancers preparing NDAs.
- Landlords preparing residential lease agreements.
- Individuals or professionals needing a first legal-document draft.

Expected Outcome

- A working application with user input, AI generation, preview/editing and document download features.
