

PHASE 6 – PROJECT TESTING

Testing Objective

- Verify that the LegalEase application works correctly from user input through AI generation, preview, editing and document download.

Test 1 – Input Validation

- Enter document type, parties, terms and effective date.
- Check that the API accepts the expected request structure.

Test 2 – AI Generation

- Generate documents using different document types and combinations of parties, terms and dates.
- Verify that structured content is returned.

Test 3 – Frontend

- Open the Streamlit application.
- Check input fields, Generate button, preview and Edit Document function.

Test 4 – Export

- Verify TXT download.
- Verify DOCX download and formatting.
- Verify PDF download and formatting.

Test 5 – Formatting

- Check headings and paragraphs.
- Check terms/bullet formatting.
- Check logo/branding and footer placement where implemented.

Test 6 – End-to-End

- Run the backend with Uvicorn and the frontend with Streamlit.
- Enter sample legal details, generate the document, edit it and download the final output.

Testing Evidence

- Keep screenshots of successful API responses, frontend generation, preview/editing and TXT/DOCX/PDF downloads for the SmartBridge submission.
