

PHASE 7 – PROJECT DOCUMENTATION

Project Report Sections

- Introduction
- Project Description
- Objectives
- Project Scenarios
- System Requirements
- Technology Stack
- System Architecture
- Workflow and Milestones
- Core Functionalities
- Backend API Design
- Frontend Design
- Document Formatting and Export
- User Workflow
- Deployment and Testing
- Advantages and Applications
- Limitations and Legal Disclaimer
- Future Enhancements
- Conclusion

Technology Documentation

- Frontend – Streamlit
- Backend – FastAPI
- Server – Uvicorn
- AI Core – Google Gemini
- DOCX – python-docx
- PDF – FPDF

User Workflow Documentation

- Open the application.
- Select/enter document type.
- Enter parties.
- Enter terms and conditions.
- Enter effective date.
- Generate the document.

- Review/edit the generated content.
- Download the final draft.

GitHub Documentation

- Include the project source code and required configuration/documentation files.
- Add a README explaining the project, setup, technologies and how to run the backend and frontend.
- Do not upload secret API keys; keep sensitive values in .env and document the required variable name.

Legal Disclaimer

- The supplied project material states that generated documents are AI-generated drafts and should be reviewed by a qualified legal professional before use for a real legal purpose.
