

PHASE 8 – PROJECT DEMONSTRATION

Demo Objective

- Demonstrate the complete working flow of LegalEase from entering legal information to generating, editing and downloading a document.

Demo Step 1 – Start Backend

- Run the FastAPI backend using Uvicorn.
- Show that the API service is running.

Demo Step 2 – Start Frontend

- Run the Streamlit application.
- Open the LegalEase interface in the browser.

Demo Step 3 – Enter Details

- Select a document type such as Employment Contract.
- Enter parties.
- Enter terms and conditions.
- Enter the effective date.

Demo Step 4 – Generate

- Click Generate Document.
- Show the generated AI-assisted legal draft in the preview area.

Demo Step 5 – Edit

- Use the edit option to modify the generated content.
- Show that the document can be reviewed before export.

Demo Step 6 – Download

- Demonstrate TXT download.
- Demonstrate DOCX download.
- Demonstrate PDF download.

Demo Evidence

- Record screenshots for the project report and a short demo video showing the complete workflow.
- The supplied project document specifically describes the generation, editing and multi-format download workflow.

Closing

- Explain the architecture: Streamlit frontend → FastAPI backend → Gemini AI → document formatting/export.
- Mention future enhancements such as deeper contract analysis, legal-database integration, multilingual capabilities and expanded templates.
